

LETTER OF RECOMMENDATION

2025-01-07

LUND UNIVERSITY

Automatic Control LTH

To whom it may concern

It is my pleasure to recommend Jakob Wirén for a role related to machine learning at your organization. I had the privilege of supervising Jakob during his Engineering Physics master project on Machine Learning for Anti-Poaching at the Department of Automatic Control at Lund University (LTH), where I am a senior lecturer since 2019.

I first got in contact with Jakob when he proactively inquired into finding an international, high-impact project for his thesis. As we jointly found a suitable project, Jakob applied for and attained a third-party grant for his project, financing his multiple-month research visit to South Africa.

During his work, Jakob showcased both expertise and autonomy in developing Machine Learning in all stages of the project pipeline—from data collection and processing, model development and tuning, to evaluation. He worked methodically and showed great maturity in ML practices and skills. During his time in South Africa we maintained regular contact and I saw clearly that, besides excelling at his work, he was passionate about working in a new international environment.

Jakob is both creative and disciplined. He was ahead of the original plan throughout the project, and continuously documented progress. The quality of writing of the thesis he produced is amongst the best I have seen at LTH. He is currently extending this work into an article for EUSIPCO—a well-renowned signal processing conference—and it is my firm belief that his contribution has good potential to be accepted.

For all of these reasons, I wholeheartedly endorse Jakob as a valuable addition to any team seeking a passionate and skilled engineer in the field.

I would be more than happy to answer any questions or discuss my recommendation further; please feel free to contact me at kristian.soltesz@control.lth.se.
